Electric excavator, London

Steel fabrication/excavation, Austria

Forestry, Slovakia

Maintenance of swamps, Florida, USA

Slope reinforcement, California, USA

Ski piste construction, Bulgaria

Civil emergency assistance, China

Top performance

for versatile and
flexible use

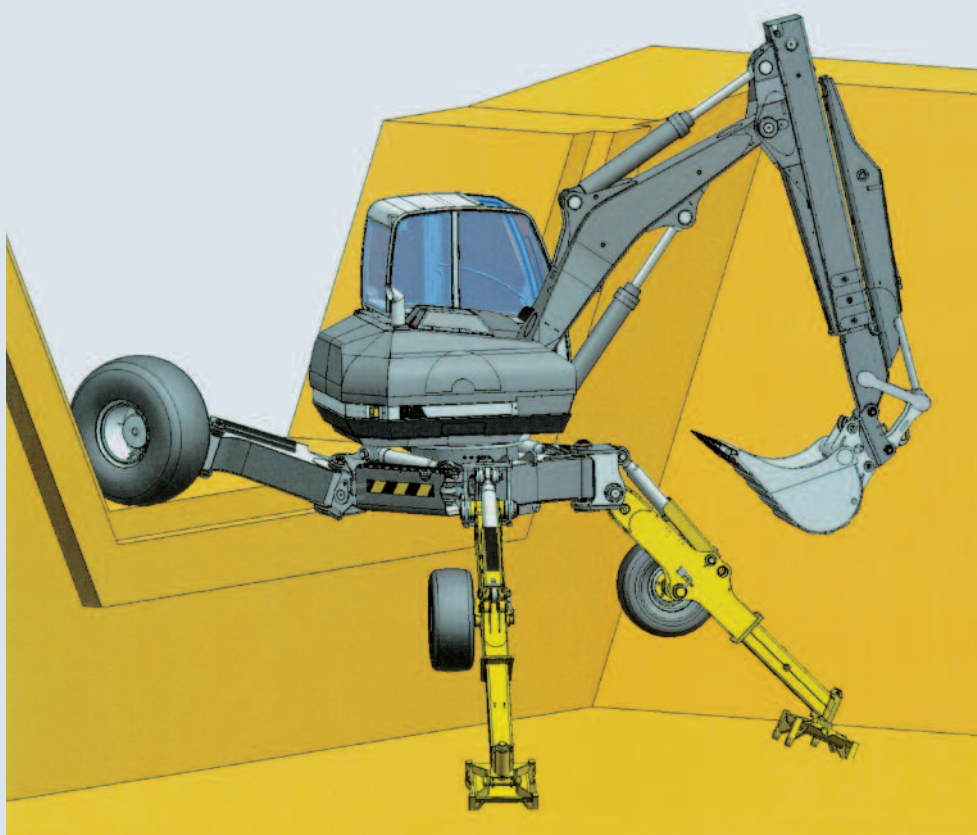

S2

From 9.8 t. The S2 is the ideal all-round machine for versatile use in difficult terrain. Obstacles such as slopes or river beds pose no problem – the S2 is ready for any challenge. The hydraulically adjustable legs offer optimal support. The steering wheels can be quickly removed for stability in extreme terrain.

The Kaiser S2 is the most popular walking mobile excavator in the world and sets standards for high performance throughout the industry. The 2007 version has been further optimised to increase overall efficiency and performance.

Features

- Unattained lifting and slewing forces
- Fast and precise hydraulics
- Rugged steel construction
- Superior stability

Exceptional climbing ability

with maximum mobility

S2
4 X 4

From 10.2 t. The special design of the S2 4x4 makes it ideal for working in difficult terrain where extra maximum mobility is required. The small front drive wheels add to enhance climbing ability with the hydraulically adjustable terrain pads ensuring maximum stability in all situations.

Features

- Maximum mobility in impassable terrain
- Permanent all-wheel drive
- Dual steering: wheel steering and leg steering
- Wide pad adjustment range for variable terrain adaptation
- Compact size for transportation

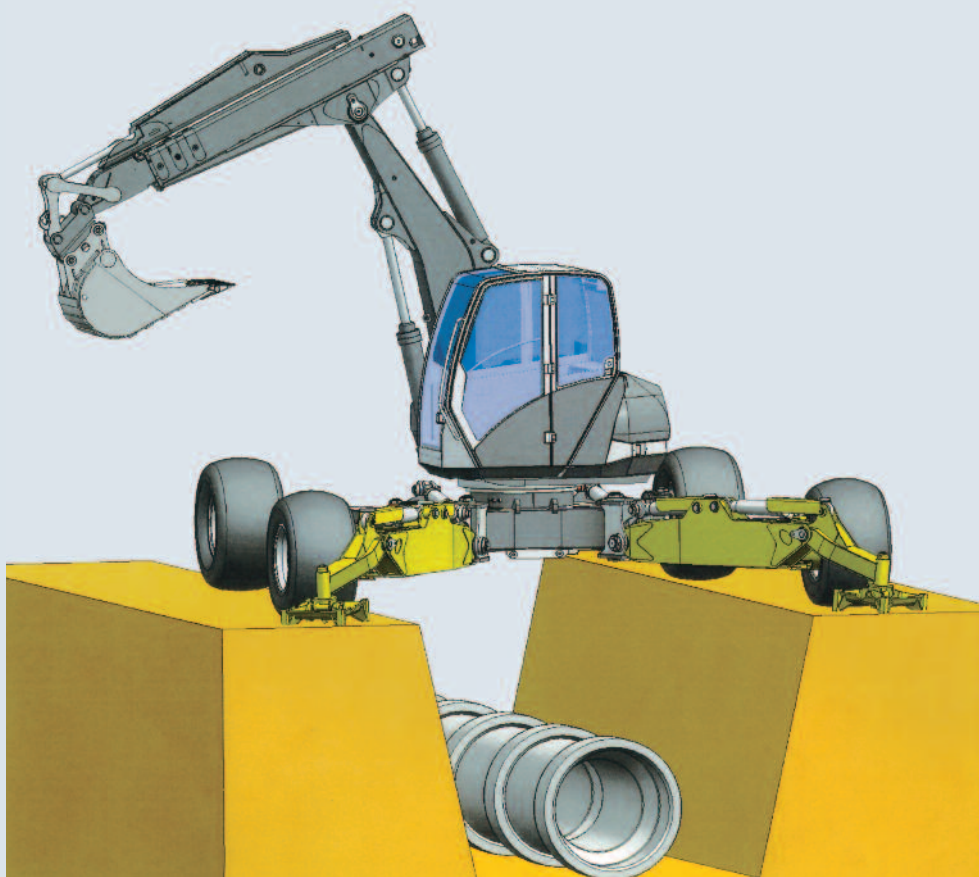

Multifunctional Carrier

From 10.9 t. The four large steerable front driving wheels are ideal for use above trenches or ditches, on the side of slopes on varying levels of terrain and in forests. All wheels are steerable over the total leg adjustment for exceptional mobility. Hydraulic lowerable pads offer excellent stability.

Features

- All-wheel steering for maximum manoeuvrability without compromising stability
- Triple steering: Leg and wheel steering front and rear
- Optimal driving and steering with permanent all-wheel drive
- Low ground pressure due to four large tyres
- Ideal gravity centre ensures optimal stability when using powerful attachments

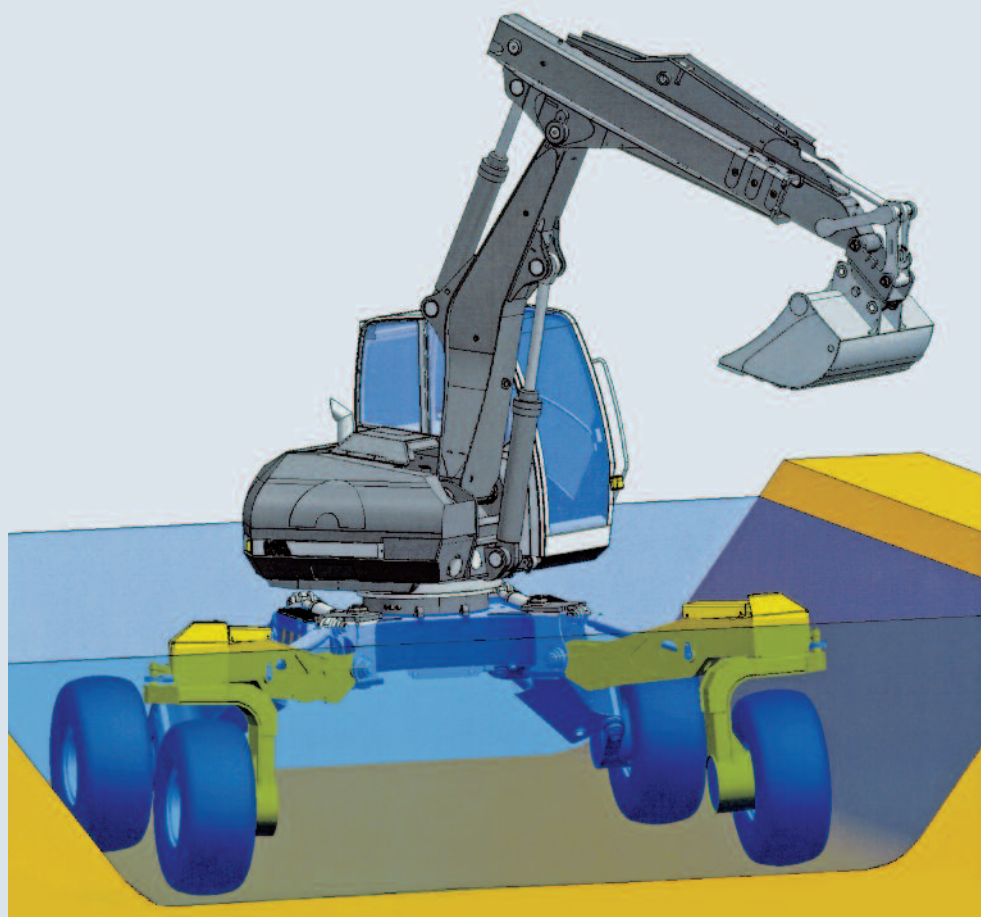

The high performer for use in water and swamps

S2
4X4 GATOR

From 10.9 t. The special front-wheel steering enables efficient use in harsh swamp and marshland or water. Rolling resistance is low due to the special design of the legs. The machine can be raised for deep mudflats.

Features

- Low rolling resistance in rivers
- Triple steering: Leg and wheel steering front and rear
- Low ground pressure due to four large tyres
- Optimal driving and steering with permanent all-wheel drive
- Maximum stability on soft ground

Equipment of S2 series

Boom

Hydraulic cylinder end position damping	●	●	●	●
Loose and fixed bearings with bushes	●	●	●	●
Load hook	●	●	●	●
